

1 **ABSTRACT OF THE DISCLOSURE**

2

3 A pleated shade assembly capable of height
4 adjustment without use of pull cords, comprising an
5 upper elongated support; a lower elongated member that
6 is manually adjustable up and down; primary lines
7 extending through shade pleats to suspend the bottom
8 elongated member; primary rotors at the top elongated
9 support to entrain the primary lines; at least one
10 secondary line having operative connection to the
11 primary lines; and apparatus acting on the secondary
12 line or lines for counterbalancing suspension force
13 exerted on the primary lines at different shade height
14 adjusted levels including dual rotary members exerting
15 tensioning force on said secondary line or lines, and
16 including a spring coupled to the dual rotary members
17 exerting force tending to entrain the secondary line or
18 lines about the dual rotary members, for storage on at
19 least one of the members.
